# Bio Larvicide Granules

Bio larvicide is the substance that is used against the larval life cycle. This helps to stop the life cycle and decreasing the number of mosquitoes. The bio larvicide granules can be contact poisons, stomach poison or development/natural controllers. The use of bio larvicide stops the growth of mosquitoes and prevents them from increasing.

# Bio Plant Growth Promoter

The bio plant growth promoter is used to improve the growth rate of the plant. This helps to enhance the speed of growth as well as increases the fruit that is produced by the plant.

They are mainly used by the

farmers to increase the productivity of their crop. Another advantage of the bio plant growth promoter is that it does not cause any harmful effect on the plant or soil as well as the health of the one that consumes it.

# Plant Growth Regulator

The plant growth regulator enhances the growth rate of the plant. This regulator provides the necessary elements and nutrients to the plant that help the plant to grow at a better rate and improves the quality of fruit that the crop yields. They are offered in various range varying in their constituents as per the type of plant for which it is to be used.

# Organic Manure

The organic manure we manufacture is made from neem, compost, vegetable matter, manure and other organic substances. They provide nutrients to the soil that in turn increases the fertility of the soil. Better the quality of soil, better would be the quality and growth of plant and fruit that it yields. They do not cause any kind of harmful or adverse effect on the soil or environment.
